EMAIL SPAM DETECTION SYSTEM

AI & Machine Learning Mini Project – Google Colab Quick Guide

Files provided: Colab notebook (.ipynb) and editable project report (.docx).

1. Open Google Colab

Visit https://colab.research.google.com/ and sign in with your Google account.

2. Upload the notebook

Choose File → Upload notebook, then select Email_Spam_Detection_Mini_Project.ipynb.

3. Run all cells

Choose Runtime → Run all. Allow the dataset to download when prompted. Internet access is required for the first dataset load.

4. Check the results

Read the metrics and inspect the dataset chart and confusion matrix. Test both a spam-like and a legitimate email message.

5. Save screenshots

Capture the actual outputs listed in the report. Save the screenshots and insert them into the DOCX report.

6. Complete personal details

Fill in your name, roll number, department, college, teacher's name and date. Add the actual metric values.

7. Download and submit

Download the completed report as PDF from Word/Google Docs and keep the executed notebook as supporting source code.

Important: This is a text-based educational classifier. It does not access an email inbox and it cannot guarantee that a message is safe.
